

★ KEY FEATURES

➤ Made-to-Measure Miniature Motors

Stradale required custom-designed miniature motors for the shutter and iris module. These bespoke motors were engineered to maintain the necessary torque while being significantly smaller, allowing them to fit seamlessly within the compact design without compromising on performance.

➤ A smaller LED Engine

With an smaller opening diameter, the LED module had to be repositioned closer to the shutter and iris module, decreasing the required distance for the focal length. This reduction in size resulted in a more efficient and compact form factor, with all essential components like the colour mixing systems, animation wheel, and two gobo wheels integrated into the smaller space.

➤ Smaller Gobos

With Stradale's LED module producing a narrower beam, the rotating gobos required a corresponding reduction in image size. The gobo diameter was reduced allowing for a smaller overall gobo. This also enabled a reduction in the thickness of the gobo holders.

Stradale Profile embodies the principle of perfect scalability within Ayrton's Ultimate series, marking the debut of the brand-new 1 Series as its first ultra-compact luminaire. Following in the footsteps of Rivale, it reduces its visual footprint by 15% through meticulous engineering and extreme miniaturization. Every detail has been optimized—streamlining the structure, refining effect modules, and minimizing component size—to push integration to new limits. This unique format necessitated the development of an all-new high-efficiency 330 W LED module, precisely calibrated at 6500 K. Delivering an impressive luminous output of 20,000 lumens, it maintains optimal black body positioning to ensure a perfectly neutral white light.

Lightweight construction plays a crucial role in Stradale Profile's performance. Weighing just 23.5 kg, it sets an unprecedented benchmark for its category. Equipped with a 140 mm front lens, offering a versatile range from 4° to 52°.

➤ A More Compact Form Factor

As part of the Ultimate series, Stradale was designed to achieve a minimum beam angle of 4°. To maintain this while optimizing the smallest possible scalable form factor and ensuring continuous tilt functionality, we determined that a 140mm diameter frontal lens was the ideal solution.

➤ A Lighter, More Efficient Yoke

The smaller and lighter design of Stradale compared to Rivale Profile presented an opportunity to refine the yoke's engineering. Previous fixtures, such as Rivale and Veloce, utilized a yoke constructed from cut, folded, and assembled aluminium sheets. However, Stradale's redesigned yoke is manufactured as a single piece of die-cast aluminium. This innovation results in a structure that is not only more compact but also proportionally lighter.
